

Software Engineer – Backend (m/f/d)

Düsseldorf/Rostock/Remote – Full time position (earliest start: 01/2022)

Join us on our mission to digitalize and transform the shipbuilding industry! We are looking for a **Backend Software Engineer** who will play a major role on our way to develop a full-fledged 3D ship design software in the cloud for the era of connected shipbuilding.

Your Role

- You will play a key role in our backend development which exposes a GraphQL server with our shipbuilding business logic
- You will have the responsibility for code quality in the backend area: you perform code reviews and write complex test suites for our business logic
- You will collaborate in the design and implementation of backend components: tasks range from version control for engineering data to network-based geometry processing

Your Skills

- You have a broad range of skills with backend technologies that fit our techstack (see below)
- You are familiar with relevant design patterns & principles and you are looking forward to realize them
- You are eager to learn, proactive and have great problem-solving skills

Our promise

- You will work on a challenging project based on cutting-edge technology
- You will have the chance to qualify yourself as the lead backend developer
- An inspiring work environment with a great team
- Flexible working hours and remote working possibilities

Our techstack

Sounds exciting? We are looking forward to hearing from you! Send us your CV and join us on our mission to disrupt the shipbuilding industry:
